

## Experienced Statistician

Do you want to be part of a small, dedicated team of highly experienced statisticians in a friendly environment with flexible working conditions, high level of independence and diverse statistical tasks? Then you could be our new colleague.

**Larix A/S is a Nordic Contract Research Organisation (CRO)** – we offer full-service solutions within the pharmaceutical, biotech and medical device areas. Our headquarters are located in Herlev near Copenhagen, and we have strong ties to the thriving pharmaceutical and biotech activities in this region.

**At Larix, we maintain a friendly atmosphere** – we think having fun while working is important, and we prioritize creating a work environment with a healthy work-life balance. We are a relatively small company with approximately 50 employees, and we have all the benefits of being able to collaborate across functions and learn from each other.

**At Larix, you will be part of our Biostatistics Department** in Denmark. We are an openminded and pragmatic team of five statisticians, who currently provide statistical support within the area's biostatistics, epidemiology, and market access. Dependent on the size of the task we either work independently or in teams, but we always find time to help and discuss with each other.

As a member of the biostatistics team, you will typically be responsible for a number of clinical studies or other statistical tasks within drug development for different clients. This means that you will often handle different indications and development phases at the same time. You will work on these tasks either from our offices in Herlev together with colleagues within Larix, or you will work from a client's office in the Copenhagen area together with their staff. Based on your preferences and the tasks at hand we try to find a balance that suits you.

Our focus is to deliver quality on time for our customers, which we also expect from you. In return, we offer a flexible setting; for example, we are open towards part time- or home-based team members within Northern Europe.

**We are looking for a senior statistician, statistics specialist or a principal statistician** who finds energy in solving complex statistical issues as well as being operational. Ideally,

- You have a MSc or PhD in Statistics or in natural science with a substantial statistical component
- You have expert knowledge of statistical methodologies related to trial design and reporting of these including the latest developments within the field
- You have a solid experience within programming, modelling and simulations in a statistical software, preferably SAS.
- You have a solid experience with drug development and the regulatory environment
- You are able to handle several tasks at the same time and maintain a high level of quality
- You are able to communicate technical aspects to a non-technical audience
- You are easy to collaborate with

**At Larix, we look forward to welcoming you on board** - We offer a competitive salary with bonus, pension scheme, ongoing education, and flexibility in the daily working hours.

To apply for this position, please forward your application and CV to [job@larixcro.com](mailto:job@larixcro.com) no later than 30 Oct 2020. Note that applications will be processed on an ongoing basis.
